

Abstract

The present invention relates to an image forming apparatus comprising an image carrier for carrying an image, an intermediate transfer body to which the image on the image carrier is transferred, transfer material conveying means for conveying a transfer material along a conveyance route, transfer means for transferring the image on the intermediate transfer body onto the transfer material conveyed by the transfer material conveying means, a delivery portion for delivering the transfer material, a first openable portion openable with respect to an apparatus body, holding the intermediate transfer body and the delivery portion and a second openable portion openable of the conveyance route. The first and second openable portions are open and closed independently from each other.
